- Maintenance activities are scheduled at fixed intervals (e.g., every 3 months or 1000 operating hours).
- Suitable for equipment with predictable wear patterns.

2. Usage-Based Maintenance (UBM)

- Maintenance is triggered based on operational parameters such as cycles, throughput, or hours of use.
- Provides a more tailored approach than TBM.

3. Condition-Based Maintenance (CBM)

- Maintenance is performed based on real-time condition monitoring data.
- Allows for more precise scheduling, reducing unnecessary maintenance.

4. Predictive Maintenance (PdM)

- Utilizes advanced analytics and sensor data to predict failures before they happen.
- Offers the most efficient maintenance, often integrated with modern IoT systems.

Advantages of Scheduled Maintenance Engineering and Management

Implementing structured scheduled maintenance offers numerous benefits:

- Reduced Downtime: By anticipating failures and scheduling repairs during planned downtime, operational interruptions are minimized.
- Extended Equipment Life: Regular maintenance prevents premature wear and tear, extending asset lifespan.
